

## ENVIRONMENTAL POLICY

The board of directors of the Club Náutico Marina Internacional publicly declares its environmental commitment through this policy and the establishment of a management system that allows it to prevent as far as possible any harmful alteration of the environment and to continuously improve, in the development of its activity: Marina services (moorings, waiting dock, drinking water and electricity supplies, laundry, clean point and other services for boats).

As a venue for sporting, fishing and social activities, and due to its important economic and social involvement in the municipality of Torre Vieja, the port generates environmental aspects that must be effectively controlled in order to avoid affecting the quality of its marine and terrestrial environment.

The Board of Directors and the administration of the Club Náutico Marina Internacional is committed to comply with the legal requirements applicable to it, as well as any other environmental requirement that may be proposed voluntarily.

In this sense, the Board of Directors aims to satisfy both the needs and expectations of users and interested parties in environmental matters.

Its environmental commitment translates into the following lines of action:

- The Board of Directors maintains, at all times, a commitment to the protection of the environment, paying special attention to the prevention of pollution and all those environmental aspects that directly affect the activity of the Yacht Club.
- To selectively collect the waste generated in the port and provide the best management, avoiding its elimination whenever possible and promoting its reduction, reuse and recycling.
- To avoid any polluting discharge into marine waters.
- Reduce and control noise pollution emitted to the exterior by port activities.
- Control the consumption of natural resources, implementing water and energy saving policies.
- To fight against accidental marine pollution, providing the most appropriate material and human resources.
- Establish and maintain elements that help the integration between the port and the city (social activities, Aula del Mar). As well as taking care of the aesthetics of the port in order to reduce the impact on the landscape.
- Establish, through the Sea School, environmental education and awareness actions aimed at port users, port workers, as well as the population of the municipality of Torre Vieja and surrounding areas.

- To establish and maintain an Environmental Management System focused at the same time on the client, interested parties and the worker, effective and developed, establishing a documented system, revised to ensure the quality of our services and the reduction of the environmental impact, providing the means and resources to maintain its validity, keeping at all times the commitment to the protection of the environment, paying special attention to the prevention of pollution and all those environmental aspects that directly affect the activity of the company.

- To set objectives on a regular basis that specify these general commitments and allow the port to advance in its commitment to continuous improvement.
